### PROJECTS

**JAM(Jobs at Mail)**: An online job portal that connects jobseekers and employers, allowing job seekers to search for and apply to jobs remotely. It provides a common platform for jobseekers and employers, with separate registration forms for each. Employers can post jobs based on their requirements, while jobseekers can filter and apply for jobs that match their skills and experience. The portal also includes an administrative module for managing entities and users. This is a web-based application that streamlines the job search and recruitment process. [GitHub](#)

**Open Weather Map API** : HTML, CSS, JavaScript and OpenWeb API It provides access to a wide range of weather data, including current weather conditions, forecasts, and historical weather data. This data includes information such as temperature, humidity, wind speed, [GitHub](#)
